Education

Rutgers University - New Brunswick

New Brunswick, NJ

Master of Science in Electrical and Computer Engineering (GPA: 3.75 / 4.00)

May 2026

- **Coursework:** Cloud Computing & Big Data, Deep Learning, Networking Protocols, Software Engineering.

Rutgers University - New Brunswick

New Brunswick, NJ

Bachelor of Science in Electrical and Computer Engineering, Cum Laude

May 2025

- **3x** Dean's List

Technical Skills

Languages: Python, JavaScript, C++, SQL, YAML, HTML, CSS, Bash

Frameworks & Libraries: React, React Native, FastAPI, PyTorch, Pandas, PySpark, REST APIs

AI / ML: LLMs, AI Agents, Agentic AI, RAG, LangChain, Prompt Engineering, CrewAI, Ollama, Gemini, OpenAI

Solutions & Customer-Facing: Technical demos, proof of concept (POC) development, customer discovery, solution design, technical presentations

Cloud & DevOps: Azure, Entra ID, Google Cloud, Databricks, Docker, Kubernetes, Linux, Firebase, PostgreSQL, Vercel, Render

Tools: Jira, Kanban, Cursor, GitHub Copilot, Claude, Git, CI/CD

Experience

TARS Group LLC

September 2025 – December 2025

AI Marketing & Automation Intern - Software Engineering Role

Remote

- Represented TARS Group at two industry conferences (booth at MOVE America 2025; ADAS Summit 2025), delivering product demos and explaining AI capabilities to partners and prospective customers.
- Built a customer-facing FastAPI-React AI chatbot with Google Gemini, intent detection, FAQ retrieval, and safety guardrails, embedded in WordPress to improve productivity and reduce manual support load.
- Built a full-stack AI newsletter automation pipeline (FastAPI, Gemini/Ollama, Tavily) with human-in-the-loop review and automated delivery; deployed on Render + GitHub Pages.
- Built a real-time AV deployment map (Firebase Realtime DB, Leaflet.js) with live listeners and geospatial visualizations.

Projects

EntryWay-AI | Python, CrewAI, Ollama, AI Agents

- Built and open-sourced a multi-agent AI productivity system (CrewAI, Ollama, Gemini fallback) coordinating six agents for discovery, scoring, and content generation.
- Developed 18+ agent tools for search (DuckDuckGo, USAJobs, RemoteOK), document scoring, outreach generation, and tracking.
- Documented the project as a runnable open-source repository with retry and backoff handling for reliable pipeline execution; deployed dashboard on Vercel.

Attention Aware Mirror System | React Native, Firebase, Raspberry Pi, Arduino

- Built a cross-platform React Native app (iOS/Android, Expo) for real-time mirror control with secure login.
- Integrated Firebase Auth and Google OAuth for secure identity and session management with strict access rules.
- Implemented low-latency WebSocket communication to a Raspberry Pi 5; assisted with Raspberry Pi and Arduino motor-control integration.

Anzom Website Development | HTML, CSS, JavaScript, PostgreSQL

- Built a seller product-creation flow with client-side validation and JSON submission to a PostgreSQL `/api/product` endpoint.
- Wired category, subcategory, and featured-product GET APIs to the landing page for live browsing from live data.

Hackathon

WhatsApp Message Notification Router | HackerRank Orchestrate

August 2026

- Built a multimodal AI agent classifying text, image, and voice messages into notify/digest/mute — 93.3% action accuracy.
- Used Ollama Cloud (gpt-oss:20b, gemma vision) plus local faster-whisper transcription, caching media by ID.
- Added governance controls including scam/prompt-injection defenses and TF-IDF evidence retrieval with confidence calibration.

Certifications

Rutgers Cybersecurity Certification · Python (HackerRank) · SQL (LinkedIn Learning)
